Dan Geller - Southern Regional Extension Forestry

### Additional Authors

William Hubbard – Southern Regional Extension Forestry

### The Climate Learning Network: National Climate Literacy for Extension Professionals

The Climate Learning Network (CLN) provides online training to Extension professionals and other interested agriculture and natural resource (ANR) professionals to help them incorporate climate considerations into their programs. The CLN is a national program that works with the USDA Regional Climate Hubs to translate Land Grant University Research to ANR professionals. The CLN includes a Climate Literacy Certification Training Program hosted through eXtension, the online resource for Cooperative Extension. The CLN has an extensive network of partners across the country including the USDA Regional Climate Coordinated Agricultural Project (CAP) teams, The Association of Natural Resource Extension Professionals Climate Science Initiative (ANREP/CSI), The Northern Institute for Applied Climate Science (NIACS), and the USDA Regional Climate Hubs.
